

The Child Death Review Process for County Durham and Darlington Annual Report

2017/18

Introduction

This is the 7th Annual Report of County Durham and Darlington Child Death Overview Panel (CDOP) and reflects the activity from 1 April 2017 to 31 March 2018.

The process of reviewing child deaths was established in April 2008 as outlined in Chapter 5 of Working Together to Safeguard Children 2015. It is the responsibility of Local Safeguarding Children Boards (LSCBs) to ensure that a review of every death of a child normally resident in their area is undertaken by a CDOP.

The overall purpose of County Durham and Darlington CDOP is to undertake a comprehensive and multi-disciplinary review of child deaths, in order to better understand how and why children in County Durham and Darlington die and use our findings to take action to prevent other deaths and improve the health, safety and wellbeing of children and young people in County Durham and Darlington.

Background to the Child Death Review Process

Working Together to Safeguard Children describes the process to be followed when a child dies in the Local Safeguarding Children Board (LSCB) area covered by a Child Death Overview Panel. The LSCB functions in relation to child deaths are set out in Regulation 6 of the Local Safeguarding Children Boards Regulations 2006, made under section 14(2) of the Children Act 2004. The LSCB is responsible for:

- a) collecting and analysing information about each death with a view to identifying:
 - i. any case giving rise to the need for a review mentioned in regulation 5(1)(e);
 - ii. any matters of concern affecting the safety and welfare of children in the area of the authority;
 - iii. any wider public health or safety concerns arising from a particular death or from a pattern of deaths in that area; *and*
- b) putting in place procedures for ensuring that there is a coordinated response by the authority, their Board partners and other relevant persons to an unexpected death.

There are two interrelated processes for reviewing child deaths:

1. **Rapid Response** by a group of key professionals who come together for the purpose of enquiring into and evaluating each **unexpected death; and**
2. An overview of **all deaths** up to the age of 18 years (excluding both those babies that are stillborn and planned terminations of pregnancy carried out within the law) in Durham and Darlington areas, undertaken by a panel.

The Child Death Overview Panel

A Child Death Overview Panel (CDOP) was jointly established by County Durham Local Safeguarding Children Board and Darlington Safeguarding Children Board. The Child Death Overview Panel is a sub-committee of both Durham and Darlington LSCBs. It is responsible for reviewing the available information on all child deaths and is accountable to the LSCB Chair.

The Panel has two distinct elements:

1. Case reviews

The Panel categorise a likely/cause of death, identify any environmental, extrinsic, medical or personal modifiable factors that may have contributed to the death and consider any agency, Board, regional and/or national recommendations to prevent future deaths.

2. Business

The Panel considers the business arising from case reviews and the other responsibilities and statutory functions of CDOP.

The disclosure of information about a deceased child is to enable the LSCBs to carry out its statutory functions relating to child deaths. The LSCBs use the findings from all child deaths, to inform local strategic planning on how best to safeguard and promote the welfare of children in County Durham and Darlington.

The CDOP must make a decision about whether or not a death was modifiable. Government guidance defines those in which modifiable factors may have contributed to the death. These factors are defined as those which, by means of nationally or locally achievable interventions, could be modified to reduce the risk of future child deaths.

The role of the Designated Doctor (child deaths) is carried out by a Consultant Paediatrician and the Rapid Response process is carried out by a team of senior nurses to manage and deliver the process for sudden and unexpected deaths. This ensures their active involvement at the onset of the review process in line with government guidance. The rapid review process augments the local review of all unexpected deaths and ensures that parents are engaged and received appropriate support during the process. The Rapid Response senior nurse also provides support to families following the expected death of a child, if invited to do so by the consultant paediatrician caring for the child.

A very good working relationship has been established with the Coroner for County Durham and Darlington. Meetings have taken place with the Coroner accordingly. The registrars of births and deaths are required by the Children and Young Persons Act 2008 to supply LSCBs with information which they have about the deaths of persons aged under 18 years.

The Child Death Review Process

Child Death Overview Panel

The CDOP has a fixed core membership with flexibility to co-opt other relevant professionals as and when appropriate. See Appendix 1.

The CDOP considers all outstanding reviews and collates actions and learning from Child Death Reviews into an action plan which is reviewed and updated at each CDOP meeting. This process increases accountability and provides written evidence of progress and completed actions with the facility to monitor deadlines. Experience has shown that over time it is possible to identify recurrent themes or issues.

Rapid Response

The national arrangements for a joint agency “rapid response” to unexpected child deaths and a review of all child deaths are a major step forward in helping to ensure that each bereaved family receives a thorough yet sensitive investigation of their child’s death and that professionals from all agencies will respond appropriately when a child dies unexpectedly. A joint agency approach has been in place in County Durham and Darlington since October 2009.

Nursing Service

A senior nurse/manager provides in-depth specialist expertise in the field of unexpected child deaths and respond quickly to the unexplained death of a child and undertake reviews/investigations that are highly sensitive. In addition a key component of the role is to provide bereavement support for parents.

The post-holder provides the majority of hours for the service. However, this is supplemented with a small team of dedicated nurses to provide a round the clock service seven days a week including bank holidays. They are available to respond rapidly within a timely and flexible manner.

The role of the rapid response nurse encompasses:

- Ensuring notification to the coroner.
- Early and continuing multi-agency liaison.
- Detailed and thorough history taking, including a careful review of the 24 hours preceding death and production of detailed reports following each death.
- Make immediate enquiries into and evaluate the reasons for and circumstances of death.
- Collection of relevant information about the circumstances of the death, including clinical details, analysing it and compiling a report for the pathologist carrying out the post mortem examination.
- Undertake home visits as appropriate jointly with the police.
- Maintain contact at regular intervals with family members and other professionals who have ongoing responsibilities for other family members, to ensure they are informed and kept up to date with information about the child’s death.
- Attend police briefings to jointly update colleagues.
- Together with the designated doctor for child deaths give feedback to parents, on a case by case basis, of the findings from the post mortem.
- Arrange bereavement support for the family following the conclusion of the child death investigation.

Durham and Darlington are one of only a few LSCBs that have been able to establish a robust rapid response process. This is funded by the Clinical Commissioning Group.

The contact telephone number for the rapid response service is **01388 455126**. This telephone number will automatically connect to the nurse on call.

Local Case Discussions

For most unexpected deaths a local case discussion takes place at the discretion of the Designated Doctor for Child Deaths. Local Case Discussions are convened when the results of the post-mortem and other tests are known and when all the information has been gathered, including return of all requested Agency Report Forms (Form B). This will enable a discussion of all the issues and may give the best opportunity to identify the possible cause of death and any contributory factors. All agencies involved with the child and family before and at the time of their death are invited to the meeting. To facilitate GPs being involved in the process, the meetings are held at GP's surgeries where practicable.

At this meeting all relevant information concerning the circumstances of the death, the child's history and subsequent investigations should be reviewed. The main purpose of the meeting is for sharing information to identify the cause of death and/or those factors that may have contributed to the death which includes modifiable factors and then to plan the future care for the family. Potential lessons to be learned may also be identified by this process.

After the meeting, the Designated Doctor will prepare a summary of the issues discussed, including any factors thought to have contributed to the child's death, lessons to be learned and action points. This summary will be forwarded to Durham/Darlington LSCB for consideration at the Child Death Overview Panel. Analysis Proforma will usually be completed after discussion at the Child Death Overview Panel.

Child Death Review Process

LSCB Child Death Review Business Co-ordinator receives child death notification:

- Registrar of Births and deaths have a statutory responsibility to send information to the LSCB
- Agencies aware of a child death should inform the LSCB of their involvement

Nominated officer receives notification and completes Form A with appropriate lead officer.

UNEXPECTED DEATH

YES

NO

- Health & Education to be notified.
- Rapid Response Nurse to be notified – 01388 455126
- Sudden or Unexpected Death in Childhood guidelines will be implemented

- Health & Education to be notified.
- All other deaths – seek advice of designated paediatrician (child deaths) as to whether or not a local review would be appropriate.

Paediatrician for child deaths uses agency reviews, results of post mortems and any other findings to hold a meeting of all relevant professionals to review issues relating to the child's death

Key:
 — Action to be taken
 - - - Action to be taken when appropriate

Further local reviews held at the discretion of the Designated Doctor for child deaths

LSCB Child Death Review Business Co-ordinator collates all relevant information for the case to be presented at CDOP

- The Child Death Overview Panel will ensure that each child death has had an appropriate review.
- The Child Death Overview Panel will provide an overview report on all children in that year to County Durham Local Safeguarding Children Board for deaths in County Durham and to Darlington Safeguarding Children Board for deaths in Darlington.

Child Death Review Activity

Child Death Review Notifications

33 children living in Durham and 7 children in Darlington died between 1 April 2017 and 31 March 2018. It is not possible to comment further on the analysis of this data until those deaths have been reviewed and compared against national data.

Figure 1: The number of child deaths by Local Authority by year

Unexpected Child Deaths

An **unexpected death** is **defined** as the **death** of an infant or **child** (less than 18 years old) which was not anticipated as a significant possibility 24 hours before the **death** or where there was a similarly **unexpected** collapse or incident leading to or precipitating the events which led to the **death**.

Table 1: Rapid Response Activity

2013/14	2014/15	2015/16	2016/17	2017/18
19	25	25	20	21

Child Death Overview Panel Performance

Between April 2017 and March 2018 there were four Child Death Overview Panels in which 24 cases were reviewed. One meeting was cancelled which accounts for the 37% reduction in the number of cases completed the previous year.

The Panel does not normally review cases until all information is gathered and other processes have been completed such as Serious Incident Reviews, Root Cause Analysis, criminal proceedings and Serious Case Reviews. At each Child Death Overview Panel, the Designated Doctor for Child Deaths presents the circumstances of each death to the multi-agency panel. The case is reviewed in detail and recommendations/actions logged for monitoring purposes.

Of the 24 cases reviewed in 2017/18 the following table details the time period in which death occurred:

Number of deaths which occurred in 2015/16	Number of deaths which occurred in 2016/17	Number of deaths which occurred in 2017/18
2	19	3

The CDOP determined out of the 24 cases reviewed there were modifiable factors in six deaths.

A statutory function of the CDOP is to identify and refer cases of concern to the relevant Local Safeguarding Children Board. There was one case referred by CDOP for consideration of a Serious Case Review which was not progressed. It is of note that there are other means of making a referral for a Serious Case Review before the formal CDOP process.

Timescale for Child Death Review Completion

Out of 24 completed reviews, 17% were completed in less than six months. This is a 11% decrease compared to 2016/17. Possible reasons for those taking longer than six months to complete include seven cases where the death was sudden and unexpected and two cases that were subject to other proceedings. The Child Death Overview Panel has agreed to not complete a Child Death Review until all relevant information has been received. A monitoring system has been built into the Child Death Database to specifically identify the reasons for this as well as an escalation process to address agency report forms not submitted within a timely manner.

32 child death reviews have not yet been reviewed; one from 2014/15, one from 2015/16 and six from 2016/17 and 27 will be brought forward to 2017/18. 20 of these deaths were notified as sudden and unexpected deaths which accounts for the delay in completing these.

Figure 2: Timeline between Child Death Notification and Completion

Figure 3: Category of Deaths

Categorisation is nationally determined and a glossary regarding the categorisation is found at Appendix 2.

The majority of deaths relate to life limiting conditions and perinatal/neonatal deaths which has consistently been the highest categories since the data has been collected. In this reporting period the CDOP determined that there were potentially modifiable factors three cases of sudden unexpected, unexplained deaths and two cases categorised as suicide or deliberate self-harm.

Category 2	Suicide or deliberate self-inflicted harm	Category 9	Infection
Category 3	Trauma and other external factors	Category 10	Sudden unexpected, unexplained death
Category 4	Malignancy		
Category 7	Chromosomal, genetic and congenital anomalies		
Category 8	Perinatal/neonatal event		

Chart 3: Category of Deaths (comparison with previous years)

Category 1	Deliberate inflicted injury, abuse or neglect	Category 6	Chronic medical condition
Category 2	Suicide or deliberate self-inflicted harm	Category 7	Chromosomal, genetic and congenital anomalies
Category 3	Trauma and other external factors	Category 8	Perinatal/neonatal event
Category 4	Malignancy	Category 9	Infection
Category 5	Acute medical or surgical condition	Category 10	Sudden unexpected, unexplained death

Chart 4: Modifiable Factors

Modifiable factors are factors that may have contributed to the death of the child and which, by means of locally or nationally achievable interventions could be modified to reduce the risk of future deaths.

Modifiable factors were identified in 5 deaths (21%) reviewed in 2017/18. Locally this is a 8% decrease compared to 2016-17 and is below the national data available at the end of March 2017 (27%). Three out of the five cases related to children under 1 years of age.

Contributory Factors

The following findings relate to the child death reviews completed during the reporting period:

Child's Needs,

- 18 health factors were identified which was determined to provide a complete and sufficient explanation for the death.
- One case identified the emotional/behavioural/mental health condition of the child contributed to the vulnerability, ill-health or death of the child.
- There was two case where alcohol/substance misuse by the child was determined to provide a complete and sufficient explanation for the death.

Family and Environment,

- There were two cases where parental substance misuse was identified as to having contributed to the vulnerability, ill-health or death of the child.
- There were one cases where smoking by the parent/carer was identified as to having contributed to the vulnerability, ill-health or death of the child.
- There were one case where smoking during pregnancy was identified as to having contributed to the vulnerability, ill-health or death of the child
- Two cases where co-sleeping was identified as to having contributed to the vulnerability, ill-health or death of the child.

Service Provision,

- One case was identified where access to health care or prior medical intervention were factors that contributed to the vulnerability, ill-health or death of the child.

Chart 5: Where the child was at the time of death

The majority of deaths considered by the Child Death Overview Panel during the reporting period occurred at the home of normal residence which has remained consistently the highest number for the last three years. 17% relate to those with life limiting conditions and 17% died unexpectedly. The Child Death Overview Panel identified modifiable factors in three out of the 8 deaths at home.

Chart 6: Ages of Children

The deaths of children under one year old (neonatal and post-neonatal) account for around 64% of all child deaths. The reporting period 2016/17 has demonstrated a local position slightly lower than the national average (55%). For Under 10's and Over 10's the local picture shows a slightly higher number compared to the national average (under 10%).

Table 7: Gender

The reporting period demonstrates 71% of completed cases being in relation to male deaths.

National and Regional Information

National

As part of the Sir Alan Wood's 2016 review of the effectiveness of local safeguarding children it was recommended that:

Child death reviews should continue to be hosted within local multi-agency arrangements but CDOPs should be hosted within the NHS, and that ownership of the arrangements for supporting CDOPs should move from the Department for Education to the Department of Health and Social Care.

This recommendation was accepted by Government in May 2016.

A transfer of the child death review policy from the Department for Education (DfE) to the Department of Health and Social Care is at its final stages and will publish the new arrangements and guidance in due course. This will include the arrangements and guidance on the 2018 data collection.

County Durham & Darlington Child Death Overview Panel have participated in the following national surveys:

- National Confidential Inquiry into Suicide and Homicide by People with Mental Illness (NCISH)
- Learning Disabilities Mortality Review Programme

Regional

The Regional Child Death Designated Professionals Group continue to meet to consider key themes and issues from the local Child Death Reviews; share learning; and to identify any national or regional issues that may affect the Child Death Review process.

Involvement of Parents

Unexpected deaths

The Rapid Response Nurses and Designated Paediatrician strive to ensure that parents are kept informed at all stages of the investigation after an unexpected death, and have the opportunity to ask questions and raise issues that can be considered at the case discussion. This process begins as soon as the Rapid Response Nurse meets the family.

In County Durham and Darlington the Child Death Review process is explained to parents. The Rapid Response Nurse liaises closely with police colleagues and the pathologist, and updates parents as soon as possible after the post mortem to feedback preliminary results. Alongside these visits the Senior Rapid Response Nurse offers to arrange bereavement support to the family and remains in contact by telephone, text and by visits according to the family's wishes.

Expected deaths

All children who die from a life-limiting condition are under the care of a paediatrician, and usually community paediatric nurses and other palliative care staff are participating in the care for the child and family. It is an expectation that the paediatrician involved with the child explains the Child Death Review Process to the family.

Analysis of Key Learning

Thematic Review of Child Deaths

Recurrent themes were identified as follows:

Age group	Theme
Perinatal and infant deaths	<i>CTG training</i>
	<i>Escalation policies</i>
	<i>Resuscitation of neonates</i>
	<i>Communication between professionals and units on the transfer of neonatal care</i>
Child deaths	<i>Mandatory training in paediatric resuscitation</i>
	<i>Emergency care plans for children with complex health problems</i>

The findings were presented at the Adult & Wellbeing Boards for both Durham and Darlington. The Chair of Child Death Overview Panel and the Darlington SCB Chair has met with NHS England who accepted the findings and agreed to incorporate these into the process.

The local CCGs have also confirmed that they will continue to provide updates regarding the work of the STPs.

Themes from Child Death Reviews completed during 2017/18

Some child death reviews highlighted issues regarding co-sleeping (2), smoking in the household (2), parental substance misuse (2), smoking during pregnancy (1), transfer (4), capacity (2), substance/alcohol misuse by child (2), mental health of child (1), communication (4), multi-agency working (1), engagement by child/family (1), and procedures (1).

All recommendations are incorporated into the Child Death Review Thematic Tool which is reviewed and updated at each Child Death Overview Panel meeting.

Areas of Good Practice

Feedback from families and professionals involved regarding the support and services provided the Rapid Responses continue to be positive

Following learning from a Child Death Review, the Police confirmed that they would raise awareness with non-Safeguarding Police staff regarding thresholds for referral.

Developments during 2017/18

Training

Training continues to be delivered to individual staff groups in order to raise awareness regarding the Child Death Review process and the roles, responsibilities and expectations in respect of those requested to provide information.

Joint training has been delivered by the Police and Rapid Response Manager as part of the national training for Detective Inspectors regarding the Child Death Review process in County Durham.

Sudden Unexpected Death in Children (SUDIC) Procedures

The SUDIC procedures have been updated and ratified by County Durham & Darlington NHS Foundation Trust.

Child Death Review Administration for Unexpected Deaths

A Service Level Agreement has been agreed between County Durham & Darlington NHS Foundation Trust and Durham LSCB for administration support to the Designated Doctor and Rapid Response Team for unexpected deaths and Local Case Discussions

CDOP Identified Developments for 2018/19

- 1. Thematic Review of Suicide or deliberate self-inflicted harm – September 2018**
- 2. Thematic Review of Sudden Infant Deaths – September 2018**
- 3. Continuation of Service Provision for Child Death Review Administration for Unexpected Deaths 2018/19**
A Service Level Agreement to be formulated between County Durham & Darlington NHS Foundation Trust and Durham LSCB for administration support to the Designated Doctor and Rapid Response Team for unexpected deaths and Local Case Discussions.
- 4. National Transitional Arrangements for Child Death Reviews**

Appendix 1

CDOP Membership as at 31 March 2018	
Dr Mike Lavender (Chairperson)	Consultant in Public Health Medicine Durham County Council
Jacqui Doherty	Business Manager, Durham LSCB
Amanda Hugill	Interim Business Manager, Darlington SCB
Emma Maynard	Admin Co-ordinator, Durham LSCB
Lesley Pringle	Locality Manager Harrogate & District NHS Foundation Trust
Dr Nnenna Cookey	Designated Paediatrician for Child Deaths County Durham & Darlington NHS Foundation Trust
Dr Stephen Cronin	Designated Paediatrician for Safeguarding County Durham & Darlington NHS Foundation Trust
Catherine Hodgkiss	Rapid Response Manager County Durham & Darlington NHS Foundation Trust
Jason Cram	Associate Director of Safeguarding & Patient Experience County Durham & Darlington NHS Foundation Trust
Detective Superintendent Dave Ashton	Durham Constabulary
Mark Gurney	Strategic Manager – Families First North Durham Children & Young People's Service
Yvonne Coates	Head of First Contact & Locality Services Darlington Children's Services
Karen Arkle	Named Lead Professional for Safeguarding Children North East Ambulance Service NHS Foundation Trust
Kim Lawther	Head of Clinical Quality Durham Dales, Easington & Sedgfield CCG
Heather McFarlane	Designated Nurse Safeguarding & Looked After Children County Durham & Darlington CCGs
Karen Agar	Associate Director of Nursing & Governance Tees, Esk & Wear Valleys NHS Foundation Trust

Appendix 2 – Glossary re Child Death Categorisation

Name & description of category
<p>Deliberately inflicted injury, abuse or neglect This includes suffocation, shaking injury, knifing, shooting, poisoning & other means of probable or definite homicide; also deaths from war, terrorism or other mass violence; includes severe neglect leading to death.</p>
<p>Suicide or deliberate self-inflicted harm This includes hanging, shooting, self-poisoning with paracetamol, death by self-asphyxia, from solvent inhalation, alcohol or drug abuse, or other form of self-harm. It will usually apply to adolescents rather than younger children.</p>
<p>Trauma and other external factors This includes isolated head injury, other or multiple trauma, burn injury, drowning, unintentional self-poisoning in pre-school children, anaphylaxis & other extrinsic factors. Excludes Deliberately inflicted injury, abuse or neglect. (category 1).</p>
<p>Malignancy Solid tumours, leukaemias & lymphomas, and malignant proliferative conditions such as histiocytosis, even if the final event leading to death was infection, haemorrhage etc.</p>
<p>Acute medical or surgical condition For example, Kawasaki disease, acute nephritis, intestinal volvulus, diabetic ketoacidosis, acute asthma, intussusception, appendicitis; sudden unexpected deaths with epilepsy.</p>
<p>Chronic medical condition For example, Crohn's disease, liver disease, immune deficiencies, even if the final event leading to death was infection, haemorrhage etc. Includes cerebral palsy with clear post-perinatal cause.</p>
<p>Chromosomal, genetic and congenital anomalies Trisomies, other chromosomal disorders, single gene defects, neurodegenerative disease, cystic fibrosis, and other congenital anomalies including cardiac.</p>
<p>Perinatal/neonatal event Death ultimately related to perinatal events, eg sequelae of prematurity, antepartum and intrapartum anoxia, bronchopulmonary dysplasia, post-haemorrhagic hydrocephalus, irrespective of age at death. It includes cerebral palsy without evidence of cause, and includes congenital or early-onset bacterial infection (onset in the first postnatal week).</p>
<p>Infection Any primary infection (ie, not a complication of one of the above categories), arising after the first postnatal week, or after discharge of a preterm baby. This would include septicaemia, pneumonia, meningitis, HIV infection etc.</p>
<p>Sudden unexpected, unexplained death Where the pathological diagnosis is either 'SIDS' or 'unascertained', at any age. Excludes Sudden Unexpected Death in Epilepsy (category 5).</p>
